-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

1. Applicant's election of Group I and the species in which the porous image-receiving layer is a polyester open cell voided film in the reply filed on October 6, 2005 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

1. Claims 1, 2, 4, 5, 15-24 and 29 are rejected under 35 U.S.C. 103(a) as being unpatentable over Iida et al. (2003/0118790) taken alone or in view of applicants' admissions concerning the state of the art, for reasons of record and for reasons given below. It is noted that [0091] of the reference clearly discloses the porous resin film as the surface layer on a base material and [0106-0107] discloses a surface oxidation treatment of the film or the laminate, including corona treatment. The extent of the treatment is disclosed in [0108]. The reference does not disclose inclusion of a mordant in the porous resin film layer, however, it would have been obvious to one of ordinary skill in the art to include this conventional additive in any layer in which dye is to be retained as an image, since this is the function of mordant.

2. Applicant's arguments filed October 6, 2005 have been fully considered but they are not persuasive. It is noted that rejection over Anagnostopoulous et al. has been withdrawn in light of applicants' response. However, contrary to applicants' assertions, the Iida et al. disclosure includes embodiments with the porous resin film as the surface layer as well as embodiments with an ink receptive layer over the porous resin film. Disclosures supporting this position are set forth above. Therefore, rejection over this reference is still considered to be proper.
